

Continuous Integration with Jenkins, Docker and Compose

Sandro Cirulli

Platform Tech Lead, Oxford University Press

Agenda

1. Introduction
2. Microservices Architecture
3. CI Workflow
4. Benefits of Docker and Compose in CI
5. Future Work

dockercon EU

Introduction

Oxford University Press and
Oxford Global Languages

About me

- ▶ I work as **Platform Tech Lead** at **Oxford University Press (OUP)**
- ▶ I deal with **system architecture and DevOps** (CI, Docker, AWS, deployment)
- ▶ I started using **Docker in November 2014** for developing language resources at OUP

About My Employer

- ▶ Oxford University Press (OUP) is a world-renowned **dictionary publisher**
- ▶ OUP launched the Oxford Global Languages (OGL) initiative to **digitize under-represented languages**
- ▶ In August 2015 OUP launched two African languages websites for **Zulu** and **Northern Sotho**

OXFORD
UNIVERSITY PRESS

Zulu and Nothern Sotho Language Websites powered by Docker

System Architecture

dev, staging & production environments

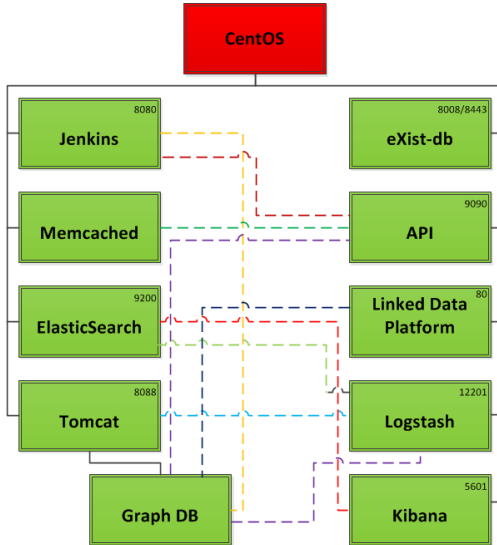

System Architecture Challenges

- ▶ We needed to **migrate** to more powerful servers and eventually to the cloud
- ▶ Some services were only needed for the **development environment**
- ▶ We wanted to put **system configuration under version control** and replicate it easily on new machines
- ▶ We wanted to **automate building processes**

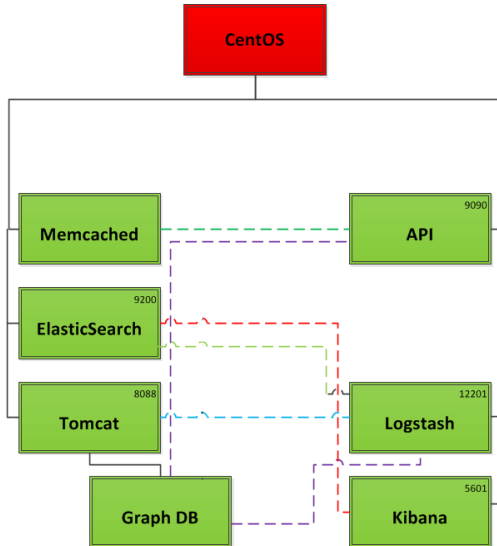

Microservices Architecture

dev/staging environments

Microservices Architecture

production environment

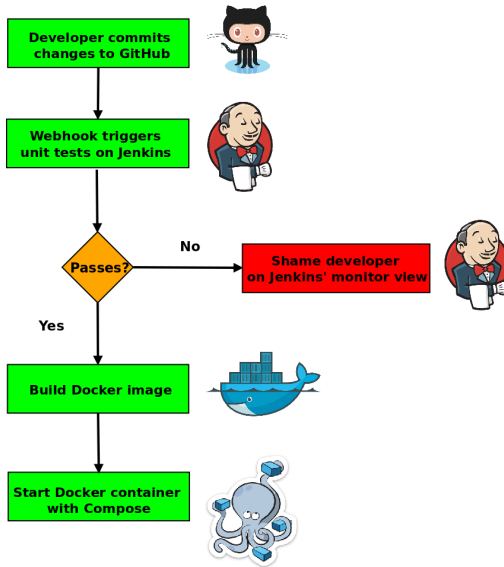

dockercon EU

CI Workflow

Walkthrough

Continuous Integration Workflow

Walkthrough

I will show you:

- ▶ **Jenkins jobs** to run:
 - ▶ unit tests
 - ▶ Docker image build and container restart
- ▶ **Shell scripts** invoked by Jenkins
- ▶ **Docker Compose file**
- ▶ Simulation of
 - ▶ **successful build**
 - ▶ **unsuccessful build**

dockercon EU

Demo

Benefits of Docker

Docker & Compose in CI

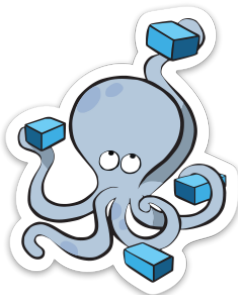

Benefits of Docker

- ▶ Docker **isolates components** and allows their organic growth
- ▶ Docker facilitates the replication of **dev/staging/production environments**
- ▶ The system architecture is under **version control**
- ▶ Docker facilitates **blue/green deployment**

Benefits of Compose

- ▶ Compose facilitates the **orchestration of linked containers**
- ▶ Compose allows to have a **single script for all the environments**
- ▶ Developers can **start/stop/rebuild containers without any deep knowledge of Docker**

dockercon EU

Future Work

Future Work

- ▶ Deploy Docker containers in **master/slave architecture**
- ▶ Experiment with **Amazon EC2 Container Service (ECS)**
- ▶ **Automate, Automate, Automate!**

dockercon EU

Summary

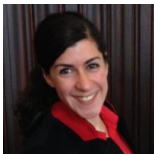

Summary

I hope I managed to show you:

- ▶ How we use **Jenkins** to build and start applications running on Docker
- ▶ How we orchestrate containers with **Docker Compose** inside different environments
- ▶ How we automated our **CI workflow**
